

ClimaTec 76

Healthy indoor climate

 **KBE**®

Window system

ClimaTec 76

Proper, regular ventilation is more important than ever, especially in better insulated rooms. If too little air is ventilated, the relative humidity rises steadily and a too humid room climate quickly develops, which favours the growth of mould. It is therefore important to achieve a healthy balance between sensible ventilation and minimal heat loss. On the one hand, this ensures sustainability in energy consumption and on the other hand, the building fabric is not attacked within the framework of building protection. With ClimaTec 76, KBE offers you a ventilation solution that ensures controlled air exchange - fully automatically, even without active ventilation.

Feel good with ClimaTec 76

The ventilation mechanism of ClimaTec 76 is concealed in the frame rebate and is hardly visible, but all the more effective: It ensures controlled air exchange without manual ventilation and requires no power source.

ClimaTec 76 can be used to regulate room humidity. This greatly minimises the risk of mould formation. The ClimaTec 76 ventilation system also has automatic wind pressure adjustment and naturally meets the requirements of the German Energy Saving Ordinance (EnEV) as well as DIN and EU standards for rainproofness, sound insulation and ventilation.

- » Self-regulating, easy to use cleaning ventilation system
- » Minimizes high humidity and the risk of mould formation
- » Supports controlled air exchange
- » Protection against insects by ventilation grids
- » Hardly visible from the inside and outside, because concealed in the frame
- » Automatic wind pressure adjustment
- » According to energy saving regulation (EnEV)
- » Tested sound insulation up to 43 dB (SSK4)
- » Watertightness and air passage according to DIN and EU standards
- » Ventilation according to DIN 1946-6
