KBE 88 Residential door system (outward opening)

KBE 88

Residential door system (outward opening)

KBE 88 is the perfect choice for all commercial and industrial buildings where outward opening doors for emergency exits are mandatory. It is also ideal for private homes with hallway space constraints.

Aesthetic entrance feature

KBE 88 is a pioneering residential door system that stylishly enhances the value of your home. It provides greater security with intruder protection, and you enjoy more comfort and better heat insulation as a result of the barrier-free threshold with thermal break.

It also offers maximum freedom of design, because it is available in a range of wood textures, plain or metallic colours, diverse functional and decorative glazing options, door panels and additional features. Show your individuality with a new KBE 88 door.

KBE 88 residential doors

- » High static stability through welded corner connectors, steel reinforcements and an installation depth of 88 mm
- » Multiple sealing layers and a barrier-free threshold with thermal break for high wind tightness
- » Excellent heat insulation properties up to passive house standard
- » Aluminium weather boards and rebate pads provide effective protection against driving rain
- » Innovative threshold connectors for a tight seal between the frame and threshold
- » Door panels 24 mm to 58 mm thick
- » Maximum sash size 1,200 x 2,400 mm
