KBE 88 Residential door system (inward opening)

KBE 88

Residential door system (inward opening)

KBE 88 is a pioneering residential door system that stylishly enhances the value of your home. It provides intruder protection for enhanced security, and you enjoy more comfort and better heat insulation as a result of the barrier-free threshold with thermal break.

Make your wishes come true

The KBE 88 residential door system maximises freedom of design. It is available in a range of wood texture, plain or metallic colours, diverse functional and decorative glazing options, door panels and additional features! Show your individuality with a new KBE 88 door.

Innovative technologies

Only the KBE 88 residential door system offers this level of technological performance. It unites excellent security, outstanding heat insulation, reliable tightness and high stability. Don't compromise. Choose KBE 88.

KBE 88 residential doors

- » High static stability through welded corner connectors, steel reinforcements and an installation depth of 88 mm
- » Multiple seal layers and a barrier-free threshold with thermal break for high wind tightness
- » Excellent heat insulation properties up to passive house standard
- » Aluminium weather boards and rebate pads provide effective protection against driving rain
- » Innovative threshold connectors for a tight seal between the frame and threshold
- » Door panels 24 mm to 58 mm thick
- » Maximum sash size 1,200 x 2,400 mm
